WHAT IS MakIoT?

MakIoT connects industrial and vehicle devices to a secure cloud platform, transforming live telemetry into dashboards, maps, alarms and remote management tools.

Device Dashboard

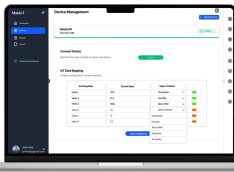

Monitor each device's health, status, alarms and recent activity from one clear dashboard.

Live Telemetry

View real-time and historical signals through interactive charts, values and trends.

Fleet Visibility

Track connected assets on the map and monitor location-based performance.

Real-Time Monitoring

Stream live data from your devices and track performance as it happens.

Remote Control

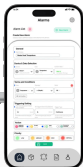

Send commands, update configurations and manage devices securely from anywhere.

Scalable Deployment

Easily connect and manage hundreds or thousands of devices across multiple locations.

Actionable Insights

Turn telemetry data into dashboards, reports, alarms and operational decisions.

HOW makIoT WORKS

Any device,
any protocol.

Reliable,
secure data flow.

Dashboards,
maps, reports.

Rules that react
to incoming data.

Reduce downtime,
decide with data.

KEY MODULES

Live telemetry, dashboard, maps and remote commands for industrial and vehicle devices alike from any browser.

CUSTOM DASHBOARDS

Build and save your own dashboard layouts.

ALARMS & HEALTH

Define rules, prioritize by severity, get notified.

LIVE DEVICE MAP

Track live location, analog data and device status.

DEVICE MONITORING & CONNECTIVITY

Watch connectivity, signal strength and event logs.

CHANNEL MAPPING & DATA TOOLS

Map sensors to named channels and generate reports.

REMOTE COMMANDS

Send commands and UDS requests with full history.

DEVICE PROVISIONING

Register, claim and configure devices securely.

AI REPORTS & ANALYTICS

Analyze vehicle usage, field performance, task progress and operational efficiency with clear reports.

Key Benefits

Real-Time Visibility

See what happening right now, everywhere.

Remote Control

Act on your assets from anywhere.

Operational Efficiency

Automate processes and reduce downtime.

Smarter Decisions

Use data and insights to plan better and act with confidence.

MORE SCREENS

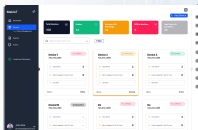

MakIoT
CONNECT MONITOR CONTROL

MakIoT brings all your IoT operations together with powerful dashboards, device management, mapping, provisioning, analytics and alarm management — all in one platform.

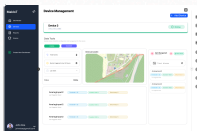

DASHBOARD OVERVIEW

Monitor live telemetry, device status, alarms and KPIs from one central screen.

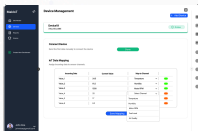

DEVICE MANAGEMENT

Organize devices, groups and connectivity status in a structured management view.

FLEET & MAP VIEW

Track connected assets and locations with real-time map visibility.

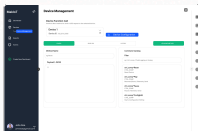

DATA MAPPING

Configure and map incoming device data to usable channels and parameters.

ALARM MANAGEMENT

Create alarm rules, monitor active warnings and define notification settings to react quickly when device issues occur.

REMOTE DEVICE COMMANDS

Send commands, invoke methods and run diagnostic requests remotely to manage connected devices without physical access.

Centralized Control

Manage all devices, sites and operations from one platform.

Real Time Visibility

Get live telemetry, status and alerts as they happen.

Faster Troubleshooting

Identify issues quickly with insights and event logs.

Web Based Access

Secure access anytime, anywhere from any browser.

FROM DEVICE DATA TO SMART MANAGEMENT

HOW MO 720 TELEMETRY AND MakIoT WORK TOGETHER?

CANBUS Data Reading

Read ECU data, motor diagnostics, fault codes and fuel consumption data.

Live Location Tracking

Monitor location, speed, mileage and vehicle movement through GNSS.

Cellular Connectivity

Ensure uninterrupted data transmission via 2G/3G/4G connectivity.

I/O Support

Enable broad integration through digital/analog inputs, digital outputs and pulse inputs.

DATA SOURCES

IoT Gateway / Edge Controller

Battery Charging

NB-IoT / LTE-M / LoRa

Wi-Fi / BLE Connectivity

CAN BUS & Local I/O

Local Rules & Fail-Safe Control

WEB PLATFORM

MakIoT

Live Dashboard

Fleet Map

Device List

MANAGEMENT TOOLS

Fault Monitoring

Monitor devices and detect issues early.

Alarm Handling

Receive alerts and manage alarms in real time.

Maintenance Planning

Plan and schedule service and repair actions.

Device Provisioning

Register/identify and organize devices.

Remote Diagnostics

Access data and diagnose remotely.

Reporting & Analysis

Generate reports and gain actionable insights.

MakIoT OUTCOMES

Faster Troubleshooting

Resolve issues quickly and reduce downtime.

Easier Monitoring

Keep full visibility of your fleet and operations.

Better Service Planning

Plan maintenance proactively and extend asset life.

Centralized Device Management

Manage all devices and data in one secure platform.

Vehicle / Machine Telemetry

Collect live telemetry, GNSS, engine and I/O data.

Live Dashboard

Visualize data with dashboard, maps and telemetry charts.

Maintenance Planning

Plan and track maintenance to reduce downtime and cost.

Device Provisioning

Register devices, assign groups and manage configurations.

ONE PLATFORM EVERY DEVICE ANYWHERE.

Maklot connects your devices, collects live telemetry and transforms data into meaningful insights. Automate actions, respond in real time and optimize operations across every location, at any scale.

Device Monitoring

Monitor connected devices and system health in real time.

Asset Tracking

Track vehicle, equipment and mobile assets live.

Alarm Management

Receive instant alerts for faults and critical events.

Remote Commands

Send commands and control actions from anywhere.

Maintenance Follow Up

Keep assets ready with service and maintenance tracking.

Data Reporting

Analyze operational performance and export reports.

Connectivity Management

Manage field connectivity across multiple communication layers.
